## Visual Metadiscourse: Designing the Considerate Text

Eric P. Kumpf  
Bradley University

Visual metadiscourse can provide design criteria for authors when considering the needs and expectations of readers. The linguistic concept of metadiscourse is expanded from the textual realm to the visual realm, where authors have many necessary design considerations as they attempt to help readers navigate through graphical and document. These considerations, both textual and visual, also help communicate the ideas of authors, let design features serve purpose, and aid in visual literacy and the communication content. Visual metadiscourse complements textual metadiscourse in emphasizing the necessity of design in technical communication.

**M**etadiscourse occurs within the realm of written communication. It is used by writers, writers, and speakers to communicate and disseminate information. Metadiscourse has been proposed by William Vande Kopple ("Some Thoughts on Technical Communication," 1990), Roger Manktelow, and Margareta Andersen ("Metadiscourse in Technical," "Metadiscourse in Popular," and "Metadiscourse in Linguistics," who explain its position during the writing process to help writers integrate and condense textual content. Metadiscourse helps writers arrange content by providing cues and instructions that both help readers process through and enhance their reception of text. For example, metadiscourse occurs with phrases such as "The next consideration..." In the example, the phrase provides a boundary by separating what will follow from what has already followed. The concept of metadiscourse in the text would then be the separation of content, making the text less cohesive and less considerable of readers. The importance of a considerate text was argued by B. N. Korten, T. H. Andersen, and R. C. Andersen as they pointed out how a considerate text should be "textbookish." This idea of a considerate text being used for the purpose of metadiscourse, as writers often use metadiscourse to make their text more logical or reader-friendly. Furthermore, a non-considerate text will result in poor reader throughput.
